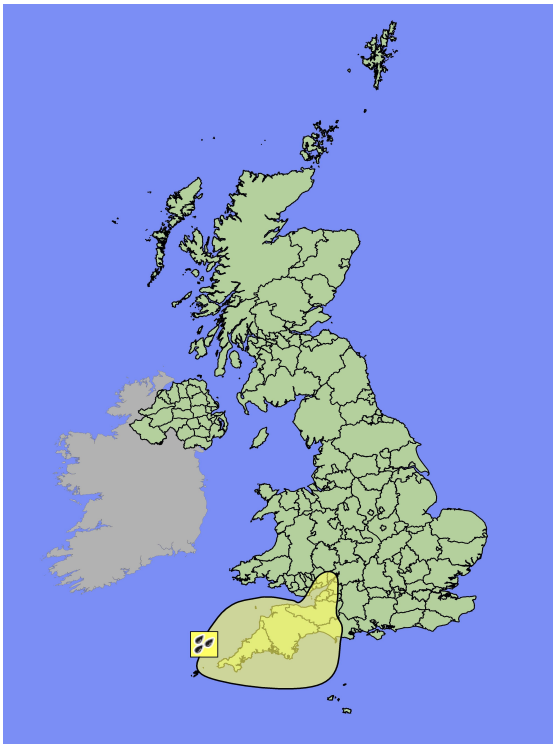
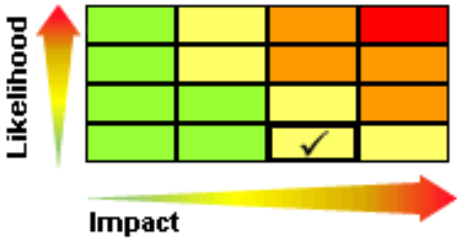
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep depression in the west Atlantic is expected to move erratically towards the UK, pulling up warm, moisture laden air as it does so. This may well cause a new, potentially intense, depression to form to the southwest of England and run northeastwards into the country later on Wednesday or during Thursday. In addition, tides will be very high, which increases the risk of flooding around the Severn Estuary. There is still a good deal of uncertainty about amounts of rain and locations affected, and this warning may well be revised over the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **15:00 on Wed, 17th Oct 2012** until **23:59 on Wed, 17th Oct 2012**

The ground remains saturated, and with the threat of further heavy rain, the public are advised to be aware that localised flooding remains a risk on Wednesday.
